CLESSENS

12-0-0

55-TU-1200UREA-2.5

12-0-0 fertilizer solution works best when plants are actively growing.

12-0-0 PLUS may be either sprayed and/or applied through the golf course irrigation system.

DIRECTIONS FOR USE: 12-0-0 may be applied as a foliar spray application on all turf grasses to enhance growth and quality, correct nutritional deficiencies and help plants rebound from stressful conditions.

12-0-0 may be applied as a dilute solution by ground application or through the irrigation system. Apply with sufficient water to achieve adequate plant coverage especially during periods of low humidity and high temperature to achieve the maximum benefit of foliar fertilization.

12-0-0 is physically compatible with most crop protection chemicals. However, it is recommended to test for compatibility in all spray combinations by a simple jar test with appropriate concentrations. Care should be taken not to blend 12-0-0 with highly acidic materials and materials containing a high level of free ammonia.

APPLICATION: Initiate applications in spring when first green-up appears and repeat as needed during the active growing season. Apply in 1-4 gallons of spray solution per 1000ft².

Do not apply to any area not specified on the label.

Bluegrass, perennial ryegrass and other cool season grasses: Apply 2-8oz. 12-0-0 PLUS/1000ft² with water for good coverage. Three to five applications per growing season usually produce the best results.

Bahiagrass, St. Augustinegrass, Tall Fescue, Bentgrass, Centipedegrass*, and Zoysiagrass: Apply 2-8oz. 12-0-0 PLUS/1000ft² with water for good coverage. For Bentgrass, do not exceed 5oz. 12-0-0 /1000ft² per application. Three to five applications per growing season usually produce the best results.

* When temperatures exceed 90° F, do not apply more than 3oz. 12-0-0 /1000ft² to Centipedegrass if 12-0-0 is applied with other fertilizers, pesticides or specialty products.

FERTIGATION: 12-0-0 may be injected at the rate of 50-100 ppm monthly.
